## Where Did All the Cancers Go?

A new study claims nearly 128,000 cancer cases went undiagnosed during the first year of the Covid pandemic. In 2020, cancer cases dropped nine percent. They dropped 50 percent during the peak of the lockdown in March through May. Health experts have no idea what happened to those cases. If true, did they die of Covid, or die of improper Covid protocols, or are they among the turbo cancers unleashed by the Covid shot?

Then again, we're hearing more and more stories of cancers being cured by ivermectin. Is it possible that ivermectin taken to treat or prevent Covid cured these cancers? That would be amazing. Or is this study a bunch of bogus extrapolated statistics? What do you think?
